

A Chinese Dragon

About political interferences in the US from the far East

#China

An important and highly recommended speech of Vice President of the United States at the Hudson Institute about China's current political interferences in the US. Worth taking around 40 minutes listening to the entire presentation.

An also very interesting video blog from the 'Economist' about a soon to be established so-called 'digital totalitarian state' in China is worth watching, too:

Also, there are [reports about concentration camp like efforts](#) in China.
